

## Updated Circuit Length Overview

Following on from affiliate feedback, Heat Trace Ltd has undertaken an internal study to re-evaluate the maximum cable circuit lengths with respect to the high temperature withstand cable range.

As an outcome of this investigation Heat Trace Ltd is pleased to announce new cable circuit lengths for high temperature withstand cables. These updated circuit lengths apply to FS+, FSS and FSU.

New maximum circuit lengths have been recalculated based on existing product constructions and materials and therefore apply to both new and existing cables and ancillaries. Any existing stock of the above products can be offered for sale based on these new maximum circuit lengths, which come into effect immediately.
